FLORIN

February 2020 Edition

Choose the best

# FLORIN

FLORIN is the new concentrated metal complex not flammable dyestuffs range that meets the always more and more needs of the leather market, particularly of the shoes and leather goods. The range includes 16 colours for a wide choice of tones.

The FLORIN dyestuffs have an excellent PVC fastness, therefore are used for effects on painted, college and nappa leathers.

Florin dyestuffs are dilutable both in water and in organic water-soluble solvents.

With FLORIN dyestuffs it is possible to get bright and intense dyeing, with good general fastness. Thanks to their brightness they are particularly suitable for dyeing of aniline leather, nubuk and leather type finishing.

#### NOTE NOTES

The information and suggestions contained in the present brochure, while relying on our best knowledge and experience, have indicative value and cannot be considered binding in any way. The use of the product must be preliminary verified in accordance to the particular working conditions.
